

Website Optimisation for Small Businesses

Helping your website work better through improved usability, visibility, and performance

About Me

My name is Danté Kellman-Thompson. I specialise in website optimisation and have helped improve websites used by people across the country.

Recently, I worked at the Office of the Small Business Commissioner (OSBC), where I led projects that promoted fair payment practices through the Fair Payment Code (FPC) and addressed issues small businesses face with trust and sustainability.

I led the relaunch and ongoing optimisation of the OSBC and FPC website, improving its ability to encourage users to take action and engage with the content.

The website later won a [Vega Award](#), which recognised its strong user experience and design as part of a larger project.

I have seen first-hand how a website can either build trust or create problems that turn customers away.

What I Do

I help small businesses improve underperforming websites so they are easier to find, use, and navigate, making it easier for customers to get in touch.

Get Started

I can share a short, personalised video review of your website with practical suggestions for improvement.

Get in touch if you'd like me to take a look.

Website Audit

I provide a clear review to identify what might be holding your website back:

- User experience (UX) issues (confusing layout, unclear messaging)
- Mobile usability problems
- SEO opportunities (visibility in search)
- Speed and performance issues
- Conversion barriers (what stops users from getting in touch)

Website Improvements

I implement changes to improve how your website performs:

- Clearer structure and navigation
- Improved calls-to-action
- Mobile optimisation
- SEO improvements
- Accessibility improvements
- Tracking setup (if needed)
- Performance and speed fixes

Ongoing Support (Optional)

- Ongoing updates based on how people use your site
- SEO monitoring and updates
- AI search visibility improvements
- Performance tracking

How I Work

- Focused on real user behaviour
- Data-informed using tools like Google Analytics
- Practical, straightforward improvements
- No unnecessary complexity or jargon

Why This Matters

Your website is often the first thing people see about your business. Even small changes can help potential customers:

- Understand what you offer
- Trust your business
- Take the next step and get in touch
